

Dumfries and Galloway Health and Social Care Partnership

MSG Improvement Objectives – summary of objectives for All Ages

Based on ISD data v1.15

March 2019

Dumfries and Galloway	Unplanned admissions	Unplanned bed days	A&E attendances	Delayed discharge bed days	Last 6 months of life	Balance of Care
Baseline	Data from Nov 2014 – Nov 2016 indicated that with no change to the current processes, we might expect to see a rise from 1400 to 1499 emergency admissions per month by the end of March 2019 (an additional 99 admissions for the month). This represents an increase of +7.1% by the end of March 2019.	Data from Nov 2014 – Nov 2016 indicated that with no change to the current processes, we might expect to see a fall from 11,428 unscheduled acute bed days to 11,185 bed days (242 fewer bed days for the month) by the end of March 2019. This represents an decrease of -2.1% by the end of March 2019.	Data from Nov 2014 – Nov 2016 indicated that with no change to the current management of A&E attendances we might expect to see a rise from 3,900 to 4,300 attendances per month (an extra 400 attendances in the month) by the end of March 2019. This represents an increase of +10.3% by the end of March 2019.	Data from Nov 2014 – Nov 2016 indicated that with no change to the current processes, we might expect to see a rise from 1,094 bed days (trend up to Dec 2016) to 1,317 bed days on average by the end of March 2019.	The proportion of time spent in a large hospital setting in people's last six months of life has increased from 8.4% in 2014/15 to 9.3% in 2015/16 and decreased to 8.7% in 2016/17p.	The proportion of people of all ages supported/unsupported at home was 98.967% in 2013/14 and 98.956% 2015/16. For people aged 75 and older, this was 92.704% and 93.006% respectively. As this is based on complete person-years, most of which have no contact, a shift of activity occurs at the 2 nd or 3 rd decimal place. This is strongly influenced by changes in population estimates which can be similar size (~300) to the total person-years spent in large hospital (~450).
Objective	Redress the current increasing trend, aiming for reduction of 3.9% by end of 2017/18 and of 7.1% by end of 2019.	Continue reducing trend, aiming for reduction of 1.2% by end of 2017/18 and of 2.1% by end of 2019.	Redress the current increasing trend, aiming for reduction of 5.5% by end of 2017/18 and of 10.3% by end of 2019.	Activity has met and sustained the original target of 1,197 by end of March 2019, for 12 months.	Match Dumfries and Galloway historic low of 8.4% in acute hospital.	Maintain balance observed in 2015/16, which has the lowest level of time spent in acute hospital (0.2897%) or

<p>Progress (updated by NHS D&G) Based on ISD data v1.15</p>	<p>1,468 (Oct 18) 12 month rolling average = 1,483</p> <p>Rolling average 5.9% above desired trajectory of 1,400 for Oct 18. (Nov 2018 data <96% complete)</p>	<p>9,776 (Oct 18) 12 month rolling average = 11,263</p> <p>Rolling average 0.3% above desired trajectory of 11,230 for Oct 18. (Nov 2018 data <96% complete)</p>	<p>3,714 (Dec 18) 12 month rolling average = 3,695</p> <p>Rolling average 4.4% below desired trajectory of 3,865 for Dec 18.</p>	<p>1,598 (Dec 18) 12 month rolling average = 1,171</p> <p>Rolling average 17.1% above desired stretch trajectory of 1,000 for Dec 18. (But 1.2% below original desired trajectory of 1,186 for Dec 18)</p>	<p>8.3% (17/18p) Below target of 8.4% by 0.1% Improved from previous year (9.1%)</p>	<p>Large hospital activity <u>2016/17</u>: 446 <u>2017/18p</u>: 450 Community hospital <u>2016/17</u>: 75 <u>2017/18p</u>: 69 Palliative care unit <u>2016/17</u>: 7 <u>2017/18p</u>: 7</p> <p>ALL Institutional: <u>2016/17</u>: 1,585 <u>2017/18p</u>: 1,583</p>
<p>Notes</p>	<p>Moved to new DGRI in Dec 17. How combined assessment unit (CAU) operates in conjunction with ED affects admission rates. The rolling 12 month average has been stable around 1,484 admissions for the last 8 months. Admissions to the CAU only (with no further onward admission) have fallen from around 390 in March 2018 to around 300.</p>	<p>Move to new DGRI in Dec 17. How combined assessment unit (CAU) operates in conjunction with ED affects admission rates; development/flow work ongoing</p>	<p>CAU model impacts on the numbers attending ED. Generally, ED attendances falling, while emergency admissions stabilising.</p> <p>4 hour ED waits reported to IJB quarterly as LDP standard B19 (Jan 2019 = 90.2%) This is lower than agreed trajectory defined in NHS Board operational plan to reach 92.2% by end March 19.</p>	<p>Delayed discharges started to increase in June 18 and have remained high.</p> <p>The day of care audit shows proportion of people not meeting criteria for the setting November 2018: 14% in DGRI 34% in cottage hospitals February 2019: 16% in DGRI 54% in cottage hospitals</p>	<p>hSMR for NHS Dumfries and Galloway good at 0.80 for Jul - Sep 2018. Mortality has fallen in the DGRI by 22.3% since baseline. Macmillan project will launch new palliative care strategy.</p>	<p>Time spent in acute hospital has risen since the previous year, while time spent in cottage hospital has fallen. Overall figures show that total time spent in all institutional settings has reduced modestly.</p>
