Right Care, Right Place

Home Teams Information

April 2023

Home Teams

Home Teams are a new way of organising community services. They bring together community based health and social care practitioners into 8 place based, multi disciplinary teams across Dumfries and Galloway (these are shown on the map on page 4). This includes community nurses, adult social care workers, healthcare support workers, allied health professionals, and health improvement practitioners. Home Teams are aligned to GP practices. Working in this way supports better coordination of care and support to enable Home Teams to adapt to meet the needs of their local population.

Home Teams are focused on delivering 5 different aspects of care and support in people's own homes:

Rapid response - Providing urgent care and support in the community when someone is in a crisis situation, hopefully preventing the need for someone to be admitted to hospital.

Discharge to assess - Supporting people to be discharged from hospital on time and to have a comprehensive assessment of their needs in their own home.

Reablement and rehabilitation - Supporting people to recover from period of ill health, or from a planned operation, and regain their independence.

Health and wellbeing - Supporting people to make positive lifestyle changes to improve their health and wellbeing outcomes.

Palliative and end of life care - Supporting people to have a good death in their own home.

As Home Teams have only recently been established, there is limited meaningful data about their activity and the people being supported by them.

Home Teams
